A wood-destroying organism inspection report is a written opinion by a qualified state licensed structural pest control inspector based upon what was visible and evident at the time of inspection. The inspection report does not in any way represent or guarantee the structure to be free from wood-destroying organisms or their damage, nor does it represent or guarantee that the total damage or infestation is limited to that disclosed in the report. Wood-destroying organisms include subterranean termites, dampwood termites, carpenter ants, wood boring beetles and wood decay fungus. A wood-destroying organism inspection report is a written opinion by a qualified state licensed structural pest control inspector based upon what was visible and evident at the time of inspection.
